

Saving lives through safer surgery

Let's save lives together.

Imagine administering anaesthesia to your patient without the use of a pulse oximeter. In more than 77,000 operating rooms across the developing world, your colleagues have no alternative—it's just too expensive. Access is the most significant barrier to widespread pulse oximetry use.

A \$250 donation to Lifebox puts this essential safety device into the hands of colleagues who need it most. Each pulse oximeter comes with training materials and a WHO Surgical Safety Checklist, shown to significantly reduce operating room complications and mortality rates.

When you donate a pulse oximeter, you're making an investment that will save lives for years to come.
